

# Mini-FT8 Git Workflow — One■Page Cheat Sheet

## Remotes

origin → your fork ([git@github.com:N6RFM/Mini-FT8.git](https://github.com/N6RFM/Mini-FT8.git))

upstream → parent repo (<https://github.com/wcheng95/Mini-FT8.git>)

## Core Rule

Never do custom work on **main**. Always work on your own branch.

## Start Working

```
git checkout -b bob-local
```

```
git add .
```

```
git commit -m "Describe change"
```

## Sync With Parent Repo

```
git fetch upstream
```

```
git merge upstream/main
```

(or)

```
git rebase upstream/main
```

## Save / Backup Your Work

```
git push origin bob-local
```

## If Conflicts Occur

Fix files → `git add <file>` → `git commit`

(or `git rebase --continue`)

## Golden Mental Model

Fetch from **upstream** • Push to **origin** • Live on your branch

*This workflow keeps your local modifications safe while tracking upstream updates cleanly.*
